Hips

“Well we are now in week three of Ruairidh being on Mobile Bones and we have seen further improvement.

Ruairidh is a six year old Bearded Collie who developed problems with his hips, so much so that it was tortuous watching him trying to get up from slumber, his legs would splay all over the place, he'd constantly limped and was grumpy from the pain, from day three of giving mobile bones he was walking without a limp, week two he was bouncing about and once again initiating play with his housemates, into week three and he's started doing things that we hadn't even registered that he'd stopped doing, like bouncing on his walk and playing tug of war with the lead. He's now nearly back to his old smiley self, he's such a treasure. I am not expecting a miracle cure but whilst I have seen this has made a massive difference I will continue to use it.” Audrey Ritchie
